

MINELA LED Task Luminaire

Minela shines with true innovation illuminating the workspace with a wide swathe of comfortable light. Shadows are completely eliminated due to Waldmann's 5-watt high-power multichip LED strip design. The Minela combines superb

lighting quality, energy-efficiency and high design to give the workplace a sleek, productive and functional environment.

Minela is a pfa Product Innovation Award "gold" winner and red dot design award winner.

FEATURES:

- 5-watt power multichip LED – high, luminous power with very little energy consumption
- 40,000 hours of LED service life
- Auto-OFF function – switches off automatically after 14 hours of uninterrupted operation
- No shadows whatsoever
- High stability and durability – joints made of glass fiber-reinforced plastic

MINELA LED Task Luminaire

MINELA stands out with its clear lines, which can be seamlessly integrated into any style.

The high-contrast interaction between chiseled and elliptical shapes gives the MINELA a unique appearance, which is underscored by the high-quality materials: the head, support arm and stand are made of powder-coated aluminum. The metal surfaces support the efficient distribution of heat produced by the light source.

The two delicate grooves on the top and bottom of the head are a very special design detail. They visually continue the line of the pivot arm and provide an interesting accent.

MINELA is equipped with three articulated joints and can be adjusted to any individual vision requirement.

The gas pressure spring relieves the joints of the weight of the luminaire. As a result, MINELA is easy to position by hand. The self-locking joints automatically secure the selected position – and the cumbersome opening and closing of tommy screws is a thing of the past. The head can be moved into any desired position in several dimensions – great for preventing reflections on shiny surfaces. Additionally, both symmetrical and asymmetrical light emission is possible.

MINELA can be used with a mobile table base, or with a table clamp (included).

MINELA is equipped with a high-power multichip LED in an innovative strip design. A special feature is the well-engineered thermal management. By using premium electronic components and materials of the luminaire head that are matched to each other, the heat of the high-performance LED is quickly dissipated. The benefits are obvious: higher energy efficiency, longer service life, and lower heating.

The long extension of the arm ensures maximum flexibility when it comes to the placement of the MINELA. The luminaire can be easily set up or attached outside of the desk, work, or reading surfaces, both to the left or the right.

The innovative strip design of the LED enables wide-spread lighting and uniform illumination of at least 24 inches x 24 inches.
